# SUNIL GAUTAM

**STAFF SOFTWARE ENGINEER – FULL STACK • Node.js • TypeScript • React • Multi-Tenant B2B SaaS • Remote**

Lucknow, India (Remote) | +91-8081433959 | business.sunilgautam@gmail.com | linkedin.com/in/sunil-gautam-061312168 | github.com/007sunilgautam

## PROFESSIONAL SUMMARY

Hands-on engineering leader with 13+ years building production full-stack systems in **Node.js, TypeScript and React**, operating as a player-coach — roughly 60% in production code (technical design, architecture, code review, testing, troubleshooting) and the rest on mentoring, delivery and cross-functional leadership. Currently owns architecture for **Zillit**, an **enterprise B2B SaaS** platform with **multi-tenant, role- and permission-scoped access (RBAC)** across web, Android and iOS. Strong in **API design, application architecture, distributed systems, event-driven design and microservices**, with **PostgreSQL, MongoDB and MySQL** data modelling and query optimisation. Drives **shift-left quality** — automated unit, integration and E2E testing, code review standards, defect prevention — plus **observability, production support and incident response**, and actively manages **technical debt**. Mentors engineers, leads design and code review, and works with Product on pragmatic technical trade-offs. Clear written English; remote-first collaboration across UK and India time zones.

## TECHNICAL SKILLS

**Backend:** Node.js, Express.js, TypeScript, REST API Design, GraphQL, Microservices, Event-Driven Design, Asynchronous Programming, Third-Party & Messaging-Based Integrations (NestJS: ready — Express hands-on)

**Frontend:** React.js, Next.js, TypeScript, Redux, Context API, Component Architecture / Design Systems, SSR & CSR, Tailwind CSS, Accessibility

**Databases:** PostgreSQL, MongoDB, MySQL, Data Modeling, Schema Design, Query Optimization, Data-Intensive Application Design

**Architecture:** Domain & Module Boundaries, Application Architecture, Distributed Systems, Scalable / Reliable / Secure Systems, Shared Abstractions, Technical Debt Management

**Multi-Tenant SaaS:** Multi-Tenant Architecture & Tenant-Scoped Data, RBAC, Organisation / Role / Permission Models, Fine-Grained Permissions, Customer Configuration, Secure Data Design

**Auth & Security:** JWT, OAuth, OIDC, RBAC, Secure API Design, Secure Coding, Application Security

**Quality & Testing:** Shift-Left Quality, Automated Testing (unit / integration / E2E), Jest, Cypress, Code Reviews, Test Coverage Standards, Defect Prevention

**Production & Observability:** Observability / Monitoring (CloudWatch), Production Support & Incident Response, Debugging & Root Cause Analysis, Performance Investigation, Refactoring

**Cloud & Delivery:** AWS (EC2, S3, RDS, CloudWatch), Firebase, CI/CD (Bitbucket, GitHub Actions), Git / PRs, ESLint / Prettier, npm (Docker, Kubernetes/Helm, Kafka/RabbitMQ, Redis, OpenTelemetry: familiar)

**Leadership:** Player-Coach Technical Leadership, Design & Code Review, Mentoring & Coaching, Technical Documentation, Sprint Planning & Estimation, Product / Design / QA Collaboration, Agile / Scrum, AI-Assisted Development (Claude, Copilot, Cursor)

## PROFESSIONAL EXPERIENCE

### Team Lead / Staff-Level Full Stack Engineer — HKK Entertainment Private Limited

**Jan 2024 – Present**

*Node.js, Express.js, TypeScript, React.js, Next.js, MongoDB, REST APIs, GraphQL, Socket.IO, Firebase, JWT/OAuth/RBAC, Jest, AWS, CI/CD*

- Own architecture and technical direction for **Zillit**, an **enterprise B2B SaaS** platform spanning web, Android and iOS — defining module boundaries, shared abstractions and API contracts as the product grew across modules, integrations and roles.
- Designed **multi-tenant, role- and permission-scoped access** — organisation, role and permission models with **RBAC** and JWT/OAuth — so customers share one platform while behaving differently.
- Build and own **Node.js/Express backend services**, REST and GraphQL APIs, and **MongoDB** data models, alongside the **React/Next.js** application and a reusable component library that cut feature effort ~20–25%.
- Built **real-time collaboration and notification** flows (Socket.IO / Firebase) and connectivity-resilient behaviour for unreliable networks.
- Lead **design reviews and difficult code reviews**, set test-coverage and secure-coding standards, and drive **shift-left quality** with Jest unit and integration tests.
- Own **production outcomes** — monitoring, performance investigation, debugging and root cause analysis — and identify technical debt worth paying down.
- Mentor **6+ engineers**, help them decompose complex problems, and work with Product on technical trade-offs; use AI-assisted development (Claude, Copilot, Cursor) and coach the team on effective AI workflows.

### Consultant Project Leader / Senior Full Stack Engineer — R Systems International

**May 2021 – Dec 2023**

*Node.js, Express.js, TypeScript, React.js, PostgreSQL, REST APIs, OAuth/JWT, AWS, Bitbucket CI/CD*

- Built and maintained web applications and secure **Node.js REST APIs** for **IATF (CIBC)**, a regulated **enterprise financial services** platform, with **PostgreSQL** data models and OAuth/JWT authorisation.
- Owned **production reliability** — troubleshooting, debugging and release quality gates — and ran **code reviews** across the team.
- Managed **CI/CD pipelines (Bitbucket)** and production releases on AWS.

### Technical Solution Architect — Shivkaal Infotech Pvt. Ltd. **Sep 2020 – Apr 2021**

*Node.js, Express.js, TypeScript, PostgreSQL, REST APIs, GraphQL*

- Architected **Krishak Fresh** end to end — designed **REST and GraphQL APIs**, relational schemas and data ownership, and secure backend architecture with role-based access.
- Defined the integration approach and built responsive React interfaces on top of it.

### Senior Software Engineer (Full Stack) — STPL **Sep 2018 – Sep 2020**

*Node.js, Express.js, Angular, TypeScript, Ionic, Cordova, MySQL, REST APIs*

- Led **fmPilot** and **fsElite Connect** — enterprise work-order platforms for multi-location field teams, with **Node.js REST backends** and clients on iOS, Android and web from a shared codebase.
- Built **offline-first synchronisation, caching and background sync**, handling partial connectivity and deferred writes so field workers stay productive on slow or lost networks.
- Implemented **role-based access** across multi-location customers; optimised API communication and performance across devices.

### Software Engineer (Full Stack) — Singsys Pte Ltd **Jan 2012 – Aug 2018**

*Node.js, JavaScript, Angular, Ionic, MySQL, REST APIs*

- Built **Tueetor**, a marketplace platform — backend **REST APIs** in Node.js plus responsive web and hybrid mobile clients, in Agile teams with Product and Design.

## SELECTED PROJECTS

**Zillit — Enterprise B2B SaaS (Web + Android + iOS).** Node.js/Express and React/Next.js platform with multi-tenant RBAC role and permission models, MongoDB data models, REST and GraphQL APIs, real-time collaboration and notifications, Jest coverage, on AWS.

**IATF — Instant Access to Deposited Funds (CIBC).** Regulated banking platform: secure Node.js REST APIs, PostgreSQL, OAuth/JWT, Bitbucket CI/CD.

**fmPilot / fsElite Connect — Field Operations.** Enterprise work-order platforms with Node.js backends, offline-first sync and role-based access across multi-location customers.

**Krishak Fresh.** E-commerce platform architected end to end — REST/GraphQL API design, relational schema and data ownership, role-based flows.

## EDUCATION

**MCA — Master of Computer Applications**, Uttar Pradesh Technical University (UPTU), 2012

BCA — Computer Applications, Bhopal University, 2009

## ADDITIONAL

**Experience:** 13+ years • **Location:** Lucknow, India — Remote • **Notice:** < 15 days • **Languages:** English, Hindi
